Orthopedic Services Leading the Way in Southern Colorado with the Latest ACL Repair Innovation

The BEAR® implant represents a groundbreaking advancement in ACL repair, enabling your body to heal its own torn Anterior Cruciate Ligament (ACL). Traditionally, a torn ACL is replaced with another tendon from your body or a donor. However, the BEAR implant, combined with your own blood, is placed between the torn ends of your ACL, facilitating the formation of a clot that is essential for natural healing.

Prowers Medical Center's Orthopedic Team, led by **Ryan Carr, MD**, and **Alan Garcia, PA-C**, is proud to offer this cutting-edge option. "We can perform approximately 90% of the procedures available in Colorado Springs or Denver," says Garcia. "We're the first in Southern Colorado to provide the BEAR implant option."

Emergency Preparedness

Did you know that Prowers Medical Center has an Emergency Preparedness Team? Just like larger communities, our hospital plans and practices for those worse case scenarios, such as natural disasters or public health crises. It's another critical community benefit for having healthcare available locally.

Welcome Dr. Shanon Forseter!

We're thrilled to announce that our OB/GYN team now offers full-time coverage! Dr. Korkis and Dr. Forseter are here to provide compassionate, expert care for expectant moms and all the women in our community. Your health and well-being are our top priority, and we're excited to support you every step of the way!

We want to hear from you! Join our Community Advisory Stakeholder Engagement (CASE) meetings. Call (719) 336-6739 for more information.

Your Place for Complete, Compassionate Care
